

**SQL Manage is an application designed specifically for use with MS SQL Server (2000\2005). The application is designed in such a way, to effectively be your organization's own DBA (Database Administrator).**

As more and more organizations choose MS SQL as their main database, there is a growing need for management and maintenance of this highly critical environment.

- Very quick installation and implementation (Average of up to 30 minutes to install and deploy the solution)
- Provides administration for all databases and/or SQL Servers
- Deals with the critical backup element
- Comes with a monitor that runs in the background, maintains the system, fixes problems and alerts the user on errors and issues needing immediate intervention
- Offers both a disaster recovery plan and a "restore to a point of time option" for your Data—even minute to minute restoration points
- Speeds up your database for better performance and cost savings
- Gives an option of archive backups for those highly critical databases at your organization
- Does not require prior database knowledge
- Analyzes your systems and creates management profiles
- Allows restoration of databases into a new blank database, so that you do not overwrite important data
- Sends important alerts to your email
- Suites both a non-sophisticated user and a sophisticated user
- Includes fast backup compression in an 8-1 ratio to save you critical disk space
- Allows backups on networked/remote devices
- Intuitive software that cooperates with you in building the maintenance schedule for your entire SQL Server(s)

SQL Manage supports SQL Server versions: 2000, 2005, MSDE

Installation requirements: P3 cpu and above, 128 MB RAM, 40MB disk space, .Net framework (comes with our installation), Win2000 and above for the administrator WS and an SQL Server in the network.
